

Tichi Automation Execution Report

Project Details

Project	Tichi Web Application
Automation Tool	Playwright
Programming Language	Python
Framework	Page Object Model (POM)
Browser	Chromium
Operating System	Windows 10 (64-bit)
Version Control	Git & GitHub
Environment	Tichi Stage Environment

Test Execution Summary

Test Case	Module	Expected Result	Actual Result	Status	Remarks
TC_LOGIN_001	Login	User logs in successfully	Successfully logged into Home page	PASS	Valid credentials
TC_LOGIN_002	Login	Invalid email validation	Validation displayed	PASS	Negative scenario
TC_LOGIN_003	Login	Invalid password message	Error displayed	PASS	Negative scenario
TC_LOGIN_004	Login	Email required validation	Validation displayed	PASS	Negative scenario
TC_SIGNUP_001	Sign Up	Redirect to Verify your Account	Redirect successful	PASS	New user registration
TC_FORGOT_001	Forgot Password	Reset email request	Redirected to Check your Email	PASS	Password reset
TC_GOOGLE_001	Google Login	Open Google authentication	Blocked by Google's automated browser security policy	BLOCKED	External dependency

Overall Result

Total Automated Scenarios: 7

Passed: 6

Blocked: 1

Failed: 0

Script Errors: 0

Remarks

- Login automation executed successfully.
- Invalid Email, Invalid Password and Empty Email scenarios were validated successfully.
- Sign Up automation redirected to the 'Verify your Account' page.
- Forgot Password automation redirected to the 'Check your Email' confirmation page.
- Google Login opened the authentication window successfully. Further authentication was blocked by Google's security policy for automated browsers.

Conclusion

Automation was successfully implemented using Playwright with the Page Object Model (POM). Seven authentication scenarios were automated. Six scenarios executed successfully. Google Login could only be partially validated because Google blocks automated authentication for security reasons, which is an external limitation rather than an application defect.
